

Front End Developer– Baltimore, MD

Kinglet is revolutionizing the commercial real estate market to create access, simplicity, and flexibility for small businesses looking to find a home for their team. Our platform helps small businesses research, identify, and secure commercial office space one desk at a time without complex lease terms and long-term commitments. We allow landlords and existing commercial tenants to make better use of their space by offering unused desks and offices to other small businesses. We deliver a fast, fluid, and dynamic digital marketplace for commercial real estate.

If you are ready to join the sharing economy and help small businesses continue to drive innovation and economic development join us at Kinglet.

Kinglet is *the* modern marketplace for office space.

Description: We're seeking a hard-core developer to create beautiful software on our front end engineering team. We're looking for great engineers who enjoy learning about and implementing the latest front-end technologies.

Position requirements:

- Bachelor's or Associate's degree
- Expertise in writing elegant and cross-browser HTML/CSS/JavaScript with an attention to detail, scalability, performance, and maintainability
- Working knowledge of Hack, JSF, Node.JS, and/or PHP
- Front end debugging experience using tools like Firebug/Chrome dev tools
- Strong problem solving, analytical, and object-oriented programming skills
- Self-motivated, organized, and driven
- Must work both independently and within a small team

Duties and Responsibilities:

- Design intuitive user experiences and interfaces in collaboration with an extended team including client consultants, graphic designers, digital artists, learning designers, filmmakers, and programmers
- Develop sites that support cross-platform usage and users, including desktop/tablet/smartphone access
- Practice and promote best-practice web usability guidelines
- Stay up-to-date on the latest trends in UI/UX Development

Optional Skills and Experience:

- Java Web Service experience
- Relational database systems and architecture (such as MySQL)
- Mobile development platforms (Objective C, Swift, Java)
- Web security practices

Apply: Please email your resume and cover letter to careers@kinglet.biz.
